

Human-in-the-Thought-Loop Manifesto

Proposed by Oleksii Kosheliev · Version 1.0 · 2026

Keep the human inside the thinking. AI assists; people frame the problem, reason, decide, verify and learn.

Growth of human thinking over outsourcing thinking to a black box.

Understanding the path to a decision over the smoothness of an instant answer.

Active judgment and questioning over comfortable acceptance.

Human-AI collaboration over human displacement.

Accountable authorship over "the system said so".

Truth-seeking and verification over plausibility and confident tone.

Long-term capability building over short-term effort savings.

Professional dignity over turning a specialist into a button operator.

Seeing consequences and being able to step in over convenience that quietly becomes dependency.

Your reasoning saved and reusable over a chat that vanishes after the answer.

Structure that lightens the load over interfaces that guess for you.
